

SEE IT FIRST — IN EVERY DIRECTION

From a tanker on the horizon to a swimmer alongside, Panoblu detects what's around you across the full 360° panorama — then **RAD** tells you exactly how far away it is.

● EVERYWHERE, AT ONCE

A PTZ covers the arc it's pointed at. Panoblu watches the entire 360° horizon, continuously — no moving parts, nothing to aim.

● LENGTH BARELY MATTERS

A tanker and a 50 m yacht are both seen to the horizon. The real test is the small, low targets — detected at hundreds of metres.

● DAY AND NIGHT

Seaview brings 8K daylight detail. Thermal IR sees through darkness, fog and smoke. One system, round the clock.

Panoblu Thermal IR — detection across the full 360° view. Clear-air estimates.

● TANKER TO SWIMMER · THERMAL IR, CLEAR AIR

TARGET	SIZE (L × H)	DETECT	RECOGNISE
Tanker / ship	250 × 25 m	Horizon	~3+ km
Superyacht ~50 m	50 × 12 m	Horizon	~1.5–2 km
Pleasure yacht	13 × 4 m	~1.5 km	~550 m
RIB / tender	6 × 2 m	~1 km	~340 m
Paddleboarder	1.0 × 0.5 m	~400 m	~135 m
Kayaker	4 × 0.7 m	~285 m	~95 m
Person in water	0.5 × 0.3 m	~200 m	~70 m

SEE IT, THEN RANGE IT — RAD

Range Awareness Display overlays live distance to every target across the full 360° panorama, on both camera systems, recorded with every frame. Detection tells you it's **there**. RAD tells you **how far** — in every direction, day or night.

DAYLIGHT DETAIL, ALL-CONDITION VISION

Seaview captures the horizon at 8K — ~1.5× the thermal resolution — for the longest reach in daylight. Thermal IR sees through the dark, fog and smoke. Seaview daylight detection: pleasure yacht **~2.4 km**, person **~300 m**.
